How can we **build** the Singapore we want to live in?

Our key priorities under the Build pillar are to:

Continue providing access to *affordable homes*, create an *inclusive mobility and community living environment* and *use technology* to improve daily connectivity and convenience

Providing access to affordable homes

- Helping young couples own their first home
- Providing a range of homes that meet different budgets and needs

Creating an inclusive mobility and community living environment

- An inclusive transport system to meet the different needs of society, including elderly and differently-abled
- More opportunities for community to be part of improving our living environment
- Pedestrian friendly and commuter centric towns

Using technology to improve daily connectivity and convenience

- Promote sustainable living, e.g., reducing energy consumption through estate planning
- Apps to create connection, encourage active citizenry and build the community
- Assistive technology to improve preventive healthcare and aged care
